

THE TRUTH ABOUT SPRAY FOAM ROOFING

What a Spray Foam Roof

There is foam and then there is coating. The foam is federally regulated and only comes from certain suppliers. The coating can come from hundreds of different suppliers and is rarely checked for approval by the city or county inspectors. Sprayed Polyurethane Foam (SPF) is the roofing system.

Important For Several Reason

- 1. Spray foam is a lifetime investment, so if your children or grandchildren inherit your property, you can educate them on how to maintain the foam roof system indefinitely.*
- 2. If you decide to sell your home and you maintain a spray foam roof properly, you're roof will always remain as it was the day it was applied. This will save you a lot of money in the sales process, as there will not be a reason to give consideration in price, because the roof will remain fully intact*
- 3. If you are purchasing a home with a spray foam roof, you will be more educated than just about everyone involved in the transaction.*

Spray Foam Roof Contractor

Your foam & coating is guaranteed to come directly from General Coatings Corporation, one of the largest manufacturers in the Western United States. This means your SPF materials are coming directly from the manufacturer rather than a independent label or mom & pop coating supplier.
